

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-24 (Canceled)

25. (Previously amended) The lighting device as defined in claim 28, wherein the front housing is pivotally connected to the rear housing to allow the front housing and the light emitting diodes to be moved relative to the rear housing.

26. (Previously amended) The lighting device as defined in claim 28, wherein the third light emitting diode provides a flood light.

27. (Previously amended) The lighting device as defined in claim 28, wherein the third light beams has a field of view of about forty degrees.

28. (Previously presented) A lighting device comprising:

a housing;

a first light emitting diode located on the housing;

a second light emitting diode located on the housing and spaced from the first light emitting diode;

a first tilting magnifier lens arranged in a light path of the first light emitting diode for focusing a first light beam onto a target area;

a second tilting magnifier lens arranged in a light path of the second light emitting diode for focusing a second light beam onto the target area;

a rear housing coupled to a back side of the housing, the rear housing having a battery compartment;

a cover disposed over a front of the housing, the cover supporting the first and second tilting magnifier lenses relative to the first and second light emitting diodes; and

a third light emitting diode located between the first and the second light emitting diodes, wherein a light path of the third light emitting diode projects through a region of the cover disposed between the first and second tilting magnifier lenses.

29. (Previously presented) The lighting device of claim 28, wherein the first and second light beams substantially overlap.

30. (Previously presented) The lighting device of claim 28, wherein a substantial amount of light emitted by the third light emitting diode does not traverse a lens.

31. (Currently amended) A lighting device comprising:

a front housing;

a first light emitting diode located on the front housing;

a second light emitting diode located on the front housing and spaced from the first light emitting diode;

a center of a first lens arranged in a central axis of a light path of the first light emitting diode for focusing a first light beam onto a target area;

a center of a second lens arranged in a central axis of a light path of the second light emitting diode for focusing a second light beam onto the target area;

a rear housing coupled to a back side of the front housing, the rear housing having a battery compartment;

a cover disposed over a front of the front housing, the cover supporting the first and second lenses relative to the first and second light emitting diodes; and

a third light emitting diode located between the first and the second light emitting diodes, wherein a central axis of a light path of the third light emitting diode projects through a region of the cover disposed between the first and second lenses.

32. (Previously presented) The lighting device of claim 31, wherein the first and second lenses are magnifying lenses.

33. (Previously presented) The lighting device of claim 31, wherein the cover supports the first and second lenses in a tilt arrangement with respect to the target area.

34. (Previously presented) The lighting device of claim 31, wherein the first and second light beams substantially overlap at the target area.

35. (Previously presented) The lighting device of claim 31, wherein a substantial amount of light emitted by the third light emitting diode does not traverse a lens.

36. (Previously presented) The lighting device of claim 31, wherein the front housing is pivotally connected to the rear housing to allow the front housing and the light emitting diodes to be moved relative to the rear housing.

37. (Previously presented) The lighting device of claim 31, wherein the third light emitting diode provides a flood light.

38. (Previously presented) The lighting device of claim 31, wherein the third light beams has a field of view of about forty degrees.

Claims 39-44 (Canceled)

45. (New) The lighting device of claim 28, wherein the third light emitting diode is red colored.

page 5, lines 15-17, page 7, 1-5 and elsewhere

46. (New) The lighting device of claim 45, wherein the first and second light emitting diodes are white colored.

page 5, lines 15-17 and elsewhere

47. (New) The lighting device of claim 31, wherein the third light emitting diode provides a red light.

48. (New) The lighting device of claim 31, wherein the front housing is rotatable about a horizontal axis relative to the rear housing.

49. (New) The lighting device of claim 48, further comprising a hinge assembly on the horizontal axis that couples the front housing and the rear housing.
